GENERAL INFO

METAL ROOFING

KEY POINTS WHY YOU SHOULD CONSIDER METAL ROOFING

- Last roof your house may ever need.
- Environmentally friendly because they are long lasting.
- Metal's proved itself for centuries in Europe, sheltering everything fr om castles to cottages.
- Metal offers several advantages over traditional materials. Metal panels are the lightest roofing products available. Steel weighs a fraction of what slate shingles or clay tile weighs. It can be installed over a layer of asphalt shingles. (Check your local building codes.)
- Unlike asphalt or wood shingles, metal will not rot crack or support algae growth. Also it's non-combustible and designed to resist hurricane for ce winds.
- Possible home insurance discount.
- About 1/4 of the content of metal panels comes from recycled metal.
- When installed over solid roof deck and attic insulation, it is as quiet as other roofing materials during a rain storm and does not increase a homes chance of being struck by lightening.
